### Tensiones de Fase y Línea

Tensiones de **Fase**:  $U_A$ ,  $U_B$ ,  $U_C$ Tensiones de **Línea**:  $U_{AB}$ ,  $U_{BC}$ ,  $U_{CA}$ 

$$\overline{U}_{AB} = \overline{U}_A - \overline{U}_B$$

$$\overline{U}_{BC} = \overline{U}_B - \overline{U}_C$$

$$\overline{U}_{CA} = \overline{U}_C - \overline{U}_A$$

$$\overline{U}_{AB} + \overline{U}_{BC} + \overline{U}_{CA} = 0$$

### Tensiones de Fase y Línea

$$\overline{U}_A = U_f / \theta_f \overline{U}_B = U_f / \theta_f - 120^\circ$$

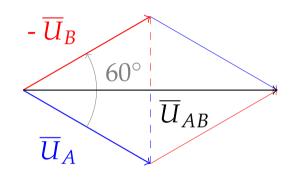

$$\overline{U}_{AB} = \overline{U}_A - \overline{U}_B =$$

$$= U_f / \underline{\theta_f} - U_f / \underline{\theta_f} - 120^\circ =$$

$$= U_f / \underline{\theta_f} + U_f / \underline{\theta_f} + 60^\circ$$

$$= 2 \cdot U_f \cdot \cos(30) / \underline{\theta_f} + 30^\circ =$$

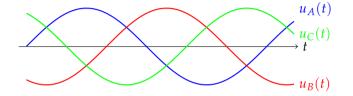

$$= \sqrt{3} U_f / \underline{\theta_f} + 30^\circ$$

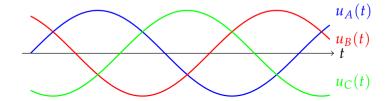

$$U = \sqrt{3} \cdot U_f$$
$$\theta_l = \theta_f + 30^\circ$$

#### Secuencia de Fases

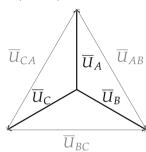

- ► Sentido en el que ocurren los máximos de cada fase.
- ► Secuencia de Fases Directa (SFD): ABC

Secuencia de Fases Inversa (SFI): ACB

# Secuencia de Fases Directa (SFD)

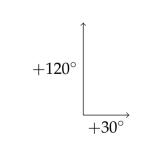

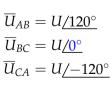

$$\overline{U}_A = \frac{U}{\sqrt{3}} / 90^{\circ}$$

$$\overline{U}_B = \frac{U}{\sqrt{3}} / -30^{\circ}$$

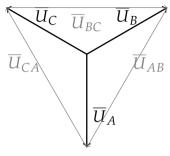

$$\overline{U}_C = \frac{U}{\sqrt{3}} / -150^{\circ}$$

$$\frac{U}{\sqrt{3}}$$
 /-150

# Secuencia de Fases Inversa (SFI)

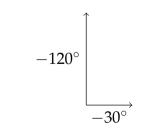

$$\overline{U}_A = \frac{U}{\sqrt{3}} / -90^{\circ}$$

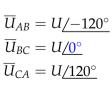

$$\overline{U}_B = \frac{U}{\sqrt{3}} / 30^{\circ}$$

$$\overline{U}_C = \frac{U}{\sqrt{3}} / 150^{\circ}$$

$$\overline{U}_B = \frac{u}{\sqrt{3}} / 30^{\circ}$$

$$\overline{U}_C = \frac{U}{\sqrt{3}} / 150^{\circ}$$

### Tipos de Receptores

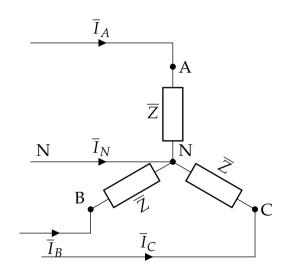

#### Conexión

- **Estrella** (punto común) Y
- ► Triángulo △

#### **Impedancias**

- **Equilibrado** (las tres impedancias son idénticas en módulo y fase).
- Desequilibrado

### Receptor en Estrella Equilibrado

$$\bar{I}_A = \frac{\overline{U}_A}{\overline{Z}} = \frac{U_f}{Z} / \pm 90^\circ - \theta$$

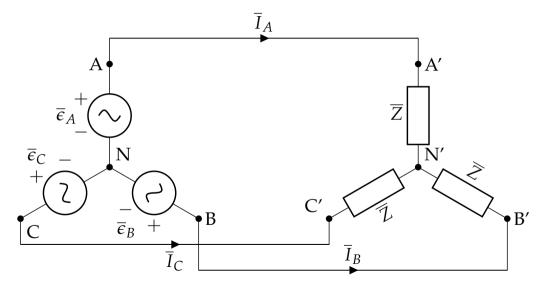

$$\bar{I}_B = \frac{\overline{U}_B}{\overline{Z}} = \frac{U_f}{Z} / \mp 30^\circ - \theta$$

$$\bar{I}_C = \frac{\overline{U}_C}{\overline{Z}} = \frac{U_f}{Z} / \mp 150^\circ - \theta$$

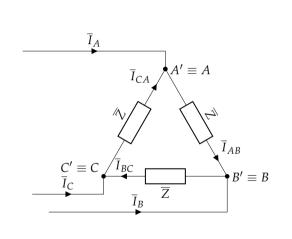

$$|\bar{I}_A| = |\bar{I}_B| = |\bar{I}_C| = \frac{U_f}{Z}$$

$$\bar{I}_A + \bar{I}_B + \bar{I}_C + \bar{I}_N = 0$$
$$\bar{I}_A + \bar{I}_B + \bar{I}_C = 0 \rightarrow \boxed{\bar{I}_N = 0}$$

## Receptor en Estrella Equilibrado

## Receptor en Triángulo Equilibrado

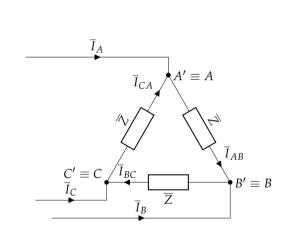

$$ar{I}_{AB}=rac{\overline{U}_{AB}}{\overline{Z}}=rac{U}{Z}/\pm120^{\circ}- heta$$
 $ar{I}_{BC}=rac{\overline{U}_{BC}}{\overline{Z}}=rac{U}{Z}/0- heta$ 
 $ar{I}_{CA}=rac{\overline{U}_{CA}}{\overline{Z}}=rac{U}{Z}/\mp120^{\circ}- heta$ 
 $ar{I}_{AB}+ar{I}_{BC}+ar{I}_{CA}=0$ 
nte de Fase:

Corriente de Fase:

$$\boxed{I_f = |\bar{I}_{AB}| = |\bar{I}_{BC}| = |\bar{I}_{CA}| = \frac{U}{Z}}$$

## Receptor en Triángulo Equilibrado

$$\bar{I}_A = \bar{I}_{AB} - \bar{I}_{CA} = \sqrt{3} \cdot \frac{U}{Z} / \pm 90^\circ - \theta$$

$$\bar{I}_B = \bar{I}_{BC} - \bar{I}_{AB} = \sqrt{3} \cdot \frac{U}{Z} / \mp 30^\circ - \theta$$

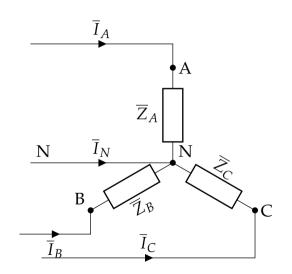

$$\bar{I}_C = \bar{I}_{CA} - \bar{I}_{BC} = \sqrt{3} \cdot \frac{U}{Z} / \mp 150^\circ - \theta$$

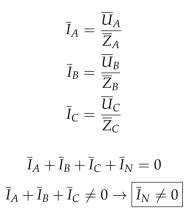

#### Corriente de Línea:

$$I = |\overline{I}_A| = |\overline{I}_B| = |\overline{I}_C| = \sqrt{3} \cdot \frac{U}{Z}$$

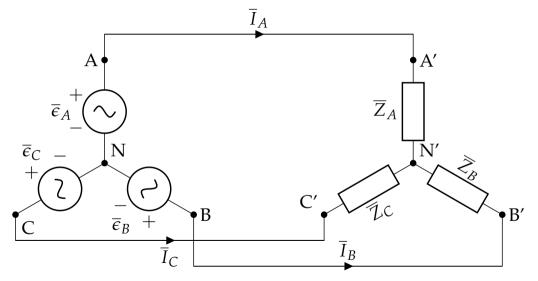

$$I=\sqrt{3}\cdot I_f$$

## Receptor en Estrella Desequilibrado con Neutro

### Receptor en Estrella Desequilibrado sin Neutro

### Método del desplazamiento del neutro

Ecuaciones del receptor:

$$\overline{U}_{A'N'} = \overline{I}_A \cdot \overline{Z}_A$$

$$\overline{U}_{B'N'} = \overline{I}_B \cdot \overline{Z}_B$$

$$\overline{U}_{C'N'} = \overline{I}_C \cdot \overline{Z}_C$$

Ecuación del nudo N':

$$\bar{I}_A + \bar{I}_B + \bar{I}_C = 0$$

### Método del desplazamiento del neutro

Relacionamos las tensiones en el receptor con las tensiones del generador:

$$\overline{U}_{A'N'} = \overline{U}_{AN} - \overline{U}_{NN'}$$

$$\overline{U}_{B'N'} = \overline{U}_{BN} - \overline{U}_{NN'}$$

$$\overline{U}_{C'N'} = \overline{U}_{CN} - \overline{U}_{NN'}$$

Despejamos las corrientes teniendo en cuenta estas relaciones:

$$\bar{I}_{A} = \frac{\overline{U}_{AN} - \overline{U}_{NN'}}{\overline{Z}_{A}}$$

$$\bar{I}_{B} = \frac{\overline{U}_{AN} - \overline{U}_{NN'}}{\overline{Z}_{B}}$$

$$\bar{I}_{C} = \frac{\overline{U}_{AN} - \overline{U}_{NN'}}{\overline{Z}_{C}}$$

### Método del desplazamiento del neutro

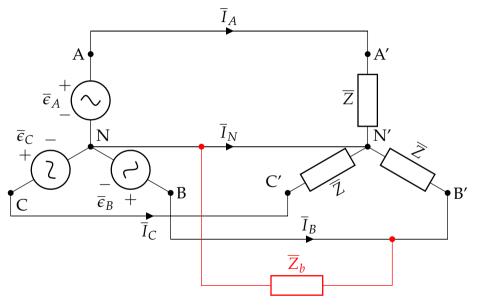

Finalmente, usando la ecuación del nudo N' despejamos la tensión  $U_{N'N}$  (tensión de desplazamiento del neutro)\*:

$$\overline{\overline{U}_{N'N}} = \frac{\overline{U}_{AN} \cdot \overline{Y}_A + \overline{U}_{BN} \cdot \overline{Y}_B + \overline{U}_{CN} \cdot \overline{Y}_C}{\overline{Y}_A + \overline{Y}_B + \overline{Y}_C}$$

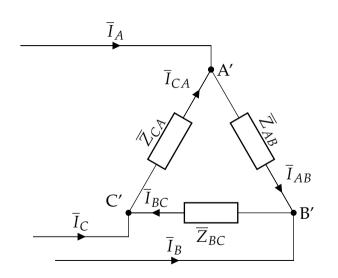

Una vez calculada esta tensión  $\overline{U}_{N'N}$  se pueden calcular las corrientes de línea.

<sup>\*</sup>Se puede llegar a este mismo resultado aplicando el teorema de Millman.

## Receptor en Estrella con Carga Monofásica

### Receptor en Triángulo Desequilibrado

$$\bar{I}_{AB} = \frac{U_{AB}}{\overline{Z}_{AB}}$$

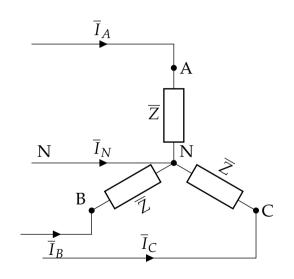

$$\bar{I}_{BC} = \frac{\overline{U}_{BC}}{\overline{Z}_{BC}}$$

$$\bar{I}_{CA} = \frac{\overline{U}_{CA}}{\overline{Z}_{CA}}$$

$$\begin{split} \overline{I}_A &= \overline{I}_{AB} - \overline{I}_{CA} \\ \overline{I}_B &= \overline{I}_{BC} - \overline{I}_{AB} \\ \overline{I}_C &= \overline{I}_{CA} - \overline{I}_{BC} \end{split}$$

## Receptor en Estrella Equilibrado

$$P = 3 \cdot P_Z = 3 \cdot U_Z I_Z \cos(\theta)$$
  

$$Q = 3 \cdot Q_Z = 3 \cdot U_Z I_Z \sin(\theta)$$

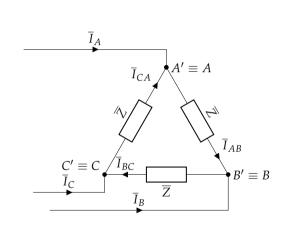

$$I_Z = I$$
$$U_Z = U_F$$

$$P = 3U_F I \cos(\theta) = \sqrt{3}UI \cos(\theta)$$

$$Q = 3U_F I \sin(\theta) = \sqrt{3}UI \sin(\theta)$$

$$S = \sqrt{P^2 + Q^2} = \sqrt{3}UI$$

## Receptor en Triángulo Equilibrado

$$P = 3 \cdot P_Z = 3 \cdot U_Z I_Z \cos(\theta)$$
  

$$Q = 3 \cdot Q_Z = 3 \cdot U_Z I_Z \sin(\theta)$$

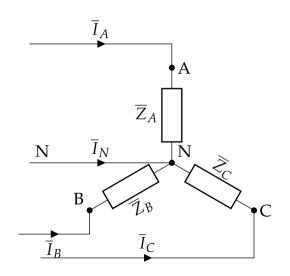

$$I_Z = I_F$$
$$U_Z = U$$

$$P = 3UI_F \cos(\theta) = \sqrt{3}UI \cos(\theta)$$

$$Q = 3UI_F \sin(\theta) = \sqrt{3}UI \sin(\theta)$$

$$S = \sqrt{P^2 + Q^2} = \sqrt{3}UI$$

## Receptor en Estrella Desequilibrado

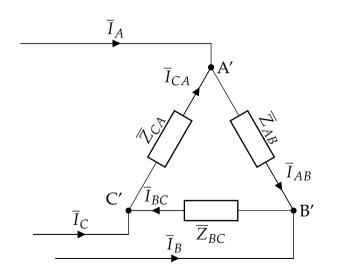

$$P = P_A + P_B + P_C$$

$$Q = Q_A + Q_B + Q_C$$

$$\overline{S} = P + jQ$$

### Receptor en Triángulo Desequilibrado

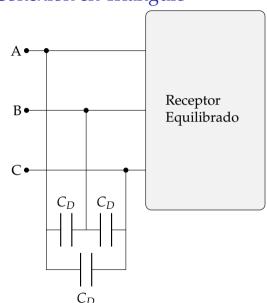

$$P = P_{AB} + P_{BC} + P_{CA}$$

$$Q = Q_{AB} + Q_{BC} + Q_{CA}$$

$$\overline{S} = P + jQ$$

### Conexión en Triángulo

$$Q = P \tan \theta$$

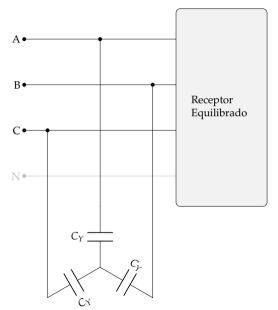

$$Q' = P \tan \theta' =$$

$$= Q - Q_c$$

$$Q_c = 3 \cdot \omega C_{\triangle} \cdot U^2$$

$$C_{\triangle} = \frac{P(\tan\theta - \tan\theta')}{3\omega U^2}$$

#### Conexión en Estrella

$$Q = P \tan \theta$$

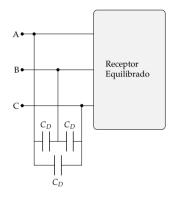

$$Q' = P \tan \theta' =$$

$$= Q - Q_c$$

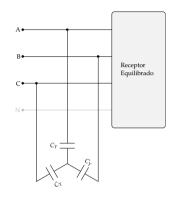

$$Q_c = 3 \cdot \omega C_Y \cdot U_f^2$$

$$C_Y = \frac{P(\tan\theta - \tan\theta')}{\omega U^2}$$

### Comparación Estrella-Triángulo

$$C_{\triangle} = \frac{P(\tan\theta - \tan\theta')}{3\omega U^2}$$

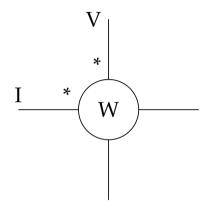

$$C_Y = \frac{P(\tan\theta - \tan\theta')}{\omega U^2}$$

Dado que  $C_Y = 3 \cdot C_{\triangle}$  la configuración recomendada es triángulo.

#### Recordatorio: vatímetro

Vatímetro: equipo de medida de 4 terminales (1 par para tensión, 1 par para corriente)

$$W = \Re(\overline{U} \cdot \overline{I}^*)$$

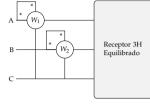

#### Sistema de 4 Hilos

 $W_1 = \Re(\overline{U}_A \cdot \overline{I}_A^*) = P_A$   $W_2 = \Re(\overline{U}_B \cdot \overline{I}_B^*) = P_B$   $W_3 = \Re(\overline{U}_C \cdot \overline{I}_C^*) = P_C$ 

 $P = W_1 + W_2 + W_3$ 

## Sistema de 3 Hilos Equilibrado

SFD SFI
$$W_1 = UI\cos(\theta - 30^{\circ})$$

$$W_2 = UI\cos(\theta + 30^\circ)$$

$$P = W_1 + W_2$$

$$Q = \sqrt{3}(W_2 - W_1)$$

 $W_1 = UI\cos(\theta + 30^\circ)$ 

 $W_2 = UI\cos(\theta - 30^\circ)$ 

 $\tan \theta = \sqrt{3} \frac{W_2 - W_1}{W_1 + W_2}$ 

$$W_1 = GS(\theta + 30^\circ)$$

$$W_2 = UI\cos(\theta + 30^\circ)$$

$$P = W_1 + W_2$$

$$Q = \sqrt{3}(W_1 - W_2)$$

 $\tan \theta = \sqrt{3} \frac{W_1 - W_2}{W_1 + W_2}$ 

### Otras conexiones: 3H SFD

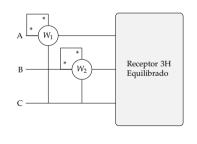

$$(ABC) :: A \triangleright B \triangleright C \Longrightarrow \{AB, BC, CA\}$$

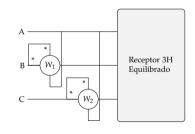

$$W_1 = UI\cos(\theta - 30^\circ)$$

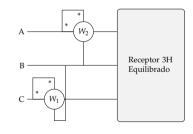

$$P = W_1 + W_2$$

$$W_2 = UI\cos(\theta + 30^\circ)$$

$$Q=\sqrt{3}(W_1-W_2)$$

$$W_1 : AC \notin SFD$$
  
 $W_2 : BC \in SFD$ 

$$W_1: BA \notin SFD$$
  
 $W_2: CA \in SFD$ 

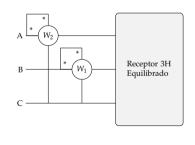

$$W_1: CB \notin SFD$$
  
 $W_2: AB \in SFD$ 

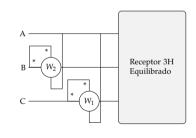

### Otras conexiones: 3H SFI

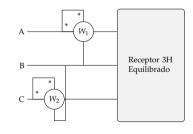

$$(ACB) :: A \triangleright C \triangleright B \Longrightarrow \{AC, CB, BA\}$$

$$W_1 = UI\cos(\theta - 30^\circ)$$
$$W_2 = UI\cos(\theta + 30^\circ)$$

$$P = W_1 + W_2$$
$$Q = \sqrt{3}(W_1 - W_2)$$

 $W_1 : BC \notin SFI$  $W_2 : AC \in SFI$   $W_1 : CA \notin SFI$  $W_2 : BA \in SFI$   $W_1: AB \notin SFI$  $W_2: CB \in SFI$ 

### Conexiones para medida de reactiva

$$W=\Re(\overline{U}_{BC}\cdot\overline{I}_A^*)$$

$$BC \in SFD$$
  
 $BC \notin SFI$ 

$$W=\Re(\overline{U}_{CA}\cdot\overline{I}_B^*)$$

$$CA \in SFD$$
  
 $CA \notin SFI$ 

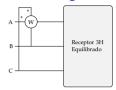

$$SFD \to W = \frac{Q}{\sqrt{3}}$$

$$SFI \to W = -\frac{Q}{\sqrt{3}}$$

$$W=\Re(\overline{U}_{AB}\cdot\overline{I}_C^*)$$

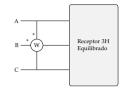

$$AB \in SFD$$
  
 $AB \notin SFI$ 

## Conexiones para medida de reactiva

$$W=\Re(\overline{U}_{CB}\cdot\overline{I}_A^*)$$

$$CB \notin SFD$$
  
 $CB \in SFI$ 

$$W=\Re(\overline{U}_{AC}\cdot\overline{I}_B^*)$$

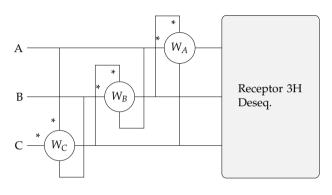

$$SFD \rightarrow W = -\frac{Q}{\sqrt{3}}$$

$$SFI \rightarrow W = \frac{Q}{\sqrt{2}}$$

$$W=\Re(\overline{U}_{BA}\cdot\overline{I}_C^*)$$

$$BA \notin SFD$$
  
 $BA \in SFI$ 

## Medida de la reactiva con receptor desequilibrado

$$W_A = \Re(\overline{U}_{BC} \cdot \overline{I}_A^*)$$
  $\overline{U}_{AB} = \pm \sqrt{3} \cdot \overline{U}_C \cdot e^{j\pi/2}$   
 $W_B = \Re(\overline{U}_{CA} \cdot \overline{I}_B^*)$   $\overline{U}_{BC} = \pm \sqrt{3} \cdot \overline{U}_A \cdot e^{j\pi/2}$ 

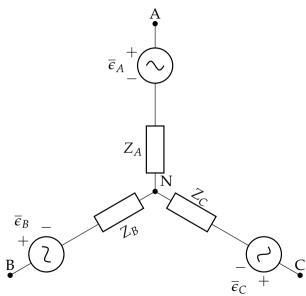

$$W_C = \Re(\overline{U}_{AB} \cdot \overline{I}_C^*)$$

$$U_{BC} = \pm \sqrt{3} \cdot U_A \cdot e^{j\pi/2}$$
$$\overline{U}_{CA} = \pm \sqrt{3} \cdot \overline{U}_B \cdot e^{j\pi/2}$$

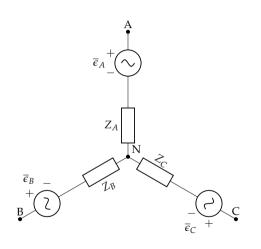

$$\boxed{W_A + W_B + W_C = \pm Q/\sqrt{3}}$$
